

One of the main goals of health system transformation is coordination of health care services. Proposed CCOs are required to engage the community and community support services in their designated service area, which in some cases, includes tribal clinics and Indian Health Services (IHS) facilities. OHA has identified tribal contacts and encourages potential CCOs to contact these individuals that have clinics or facilities in proposed service areas. This information is provided as a resource only. This list will be updated as new information is identified.

Tribal Contacts:
